

The Industry's Only 3 Full Stack Bootcamp

Why we started:

Michael Choi, Coding Dojo's Founder, discovered that many developers lacked experience of building applications. In response he created Coding Dojo's training platform to train his own developers in a relatively short time. Thus in 2012, he decided to open the platform to the public.

Our Curriculum:

We teach 3 full stacks in one 14-week program, which gives our graduates access to a much larger job market. Each stack builds upon a strong foundation of core concepts, empowering our students to be some of the most in-demand of any other bootcamp.

MEAN | **Ruby/Rails** | **Python** | **iOS**

How We Teach:

We believe in teaching by doing, where lectures are short and teachers are hands on. We hire experienced developers from organizations like Microsoft and NASA, then put them through rigorous training before placing them in a classroom. We also created a truly collaborative environment that allows people of different strengths to grow together, further expanding their breadth of knowledge and confidence.

Financing:

Whether you are just starting out or transitioning between careers, cash flow can be a tuff obstacle to overcome, so we have created the largest scholarship fund in the industry and we use it all.

Partnered with:

Career Services:

Our career development team obsesses over our students, and it shows. In 2015, 92% of our graduates found high-paying jobs in 2.5 months after graduation. They accomplish this by kicking of in-depth training even prior to graduation. Some of the important topics covered are:

TOPICS INCLUDE:

- Resume Writing
- Interview Prep
- Cover Letters, InMails & Emails
- Networking
- Salary Negotiation
- Boolean Search Techniques
- LinkedIn Optimization
